

# LOCAL CONTENT MASTER CLASS

TANZANIA, FEBRUARY 2018

# DAI Local Content Master Class

the industry-leading Master Class enabling regulators, companies, and contractors to effectively design and manage Local Content in ways that maximize benefits and minimize risk

*“Certainly the prime Local Content course in the market. Highly recommended”*

*International oil field services Local Content Manager*

# Global Economic Context

## The New Political and Compliance Landscape

Since mid 2015, the topic of Local Content has fast moved center stage across the globe, and with it the need for a **new profession** to implement fast-developing local content compliance regimes and deliver tangible local benefits as a balance to unrestrained globalization

# Why does Local Content matter?

Local Content has the potential to provide a significant political and monetary contribution to the host economy from major inward investments

# Market Context for the Master Class

**DAI SBG** specializes in tackling the growing challenges facing private sector companies (investor, operators, contractors) and public authorities in meeting Local Content regulations and supporting sustainable industrial development of host economies through the impact of capital investments and operations.

The challenges include:

- Since 2015 **dramatic falls** in commodity oil and gas prices and challenging metal and mineral prices
- Uncertain **global demand** for oil and gas and mining products
- Uneven **global recovery** after the 2008 shock, which has driven many governments to seek to privatize public infrastructure operations and investments in order to reduce government expenditure budgets
- Limited government and **regulatory capacity**
- Growing trend for governments to pass and/or strengthen **Local Content legislation**, regulations, and policy due to realization that globalization does not always demonstrably benefit local populations
- Balancing the **unintended consequences of globalization** with the **risks of protectionism** for inflation, disinvestment, unemployment, and recession

# “Ultimately...

*“...the main challenge addressed by the Local Content Master Class is how governments, investors, operators, contractors and local suppliers can better **balance the commercial realities** of reduced global demand and sustained cost pressures with the current political momentum for **increased Local Content**”*

Dr. Michael Warner

DAI SBG Senior Technical Advisor

# What is the Master Class?

**Four-day** training program covering the full landscape of Local Content

Framed by the **regional context** of Local Content regulation and sector development

Comprised of **lectures**, hands-on **group exercises**, **computer modelling**, and video **case studies**

Examines **strategic alignment** of regulations, industrial policy, and commercial interests, **smart procurement** to manage Local Content, and the **mechanics/metrics** of Local Content

# Key topics covered:

- State-of-play on Local Content **regulations** around the world
- Stimulating **stakeholder dialogue** to align Local Content public policy and regulations with corporate country-level Local Content strategy
- Hands-on economic **optimization modelling** to forecast Local Content trade-offs
- Analyzing local supplier **market capabilities** and competitiveness
- Local Content **forecasting** through expenditure projection and local supplier market analysis
- Formulating **contracting strategies** matched to local capabilities
- Local supplier **registration and pre-qualification**
- Local **supplier development** and designing Enterprise Development Centers (EDCs)
- Adapting **Invitations to Tender** (ITTs), Tender Evaluation Plans (TEPs), and contract and compensation provisions so as to incentivize Local Content
- **Tender evaluation** of Local Content in a bid submission
- Metrics for measuring and **reporting** Local Content performance
- **Ethical issues** with Local Content in procurement
- **'Who should pay'** for managing Local Content and supplier development

# Course Map and DAI Analytical Tools:

## Day 1 – Policy, Regulation and Strategy for Local Content

## Day 2 – Local Content Forecasts, Plans and Procurement

## Day 3 – Local Supplier Assessment and Development

## Day 4 – Local Content Reporting and Analysis

## DAI Tools

-  LCTO Local Content Trade-Off Model
-  LCOM Local Content Optimization Model
-  SRPQ Supplier Registration and Pre-Qualification Portal
-  LCPR Local Content Plan and Report Platform

All four tools are part of DAI SBG's Suite of Software Tools, which are described on the following page.

# DAI Analytical Tools utilized in the Master Class

## Local Content Trade-Off Model

- Sensitivity analysis of public policy trade-offs between Local Content and other economic and social policy objectives

## Local Content Optimization Model

- Demand/Supply assessment of capabilities of local suppliers and labor to win work in projects and major contracts. Generates forecast of what Can, Could and Cannot be provided by local supply chains. Informs targets, plans, contracting strategy and tender evaluation

## Supplier Registration and Pre-Qualification Portal

- On-Line portal to register local suppliers, pre-qualify for bid selection, match to international partners, and design supplier development programs

## Local Content Plan and Reporting Platform

- On-line platform to assure compliance with regulations for Local Content Plans and targets for Reporting. Generates dashboards and scorecards, evaluates major contract tenders, and calculates impact on the economy

# What is the Master Class ‘value add’?

Provides a comprehensive understanding of the different **pillars of effective Local Content participation** and Local Content **development**

**Builds capacity of the industry** to better understand and assure compliance with regulatory requirements in cost-effective ways, and **extract greater social value**, in the form of jobs, training and local economic developments

**Builds capacity of the regulator** to execute its regulatory obligations in accordance with industry good practice

Breaks down the **challenges** of Local Content from different viewpoints (policy makers, regulators, investors, operators, contractors)

Offers a range of practical, concrete **solutions** that have been tested in the field

# Who can participate?

To stimulate engagement and cross-learning between participants during the Master Class, every effort is made to invite individuals from a range of organisations involved in the Local Content management. Typical participants:

- **national and international oil, gas and mining companies** - individuals from commercial departments, contracting and procurement, external and government affairs, human resources, social performance and sustainable development
- national and international **companies** involved in other capital intensive **infrastructure, transportation, renewable energy, utilities and water management** etc. - individuals from commercial departments, contracting and procurement, external and government affairs, human resources, social performance and sustainable development
- **government policy-making authorities** - those working at the national or provincial level engaged in industrial policy, private sector development, supply-chain linkage programs and the promotion of inward investment and exports
- **host country regulatory agencies** - those responsible for setting Local Content targets, compiling aggregate demand, assessing local market capability, managing registers of domestic suppliers, engaging in tendering processes
- **international and larger-scale domestic contractors and suppliers** - those who manage local supply chains, source globally and/or have business development interests in emerging economies. Relevant departments would include: business development, account management, marketing, service delivery, production, human resources, social performance and sustainable development
- local supplier business and **trade associations**
- **official development agencies and development finance institutions** - especially those from procurement departments, oil, gas, mining and infrastructure departments and those involved in business linkage advisory services
